

Mounting Lubricant

## Dip Solution 213

Special product for the post-treatment of rubber articles and profiles to facilitate their assembly during further processing. Dip Solution 213 forms a thin and uniform film on the polymer surface, which is characterised by its high lubricity. Dip Solution 213 can be used with all polymers typical for this application.

The product offers numerous advantages:

- very good lubricity
- can easily be diluted with water
- pleasant smell
- very efficient
- does not damage metal surfaces
- long-lasting lubricity effect with closed storage (without air exchange)
