

Tire Inside Paint

PROMOL 1300 SL

PROMOL 1300 SL is ready-to-use, water-based tire inside paint, for application to the inside of green tires. The film supports demolding and offers good venting and sliding behavior at the same time.

The product offers numerous advantages:

- a thin, uniform application is sufficient
- the sliding effect is adequate and supports the lifespan of the bladder
- the film can be checked on the surface by visual inspection after application
- after vulcanization, residues are usually not visible on the inside of the tire
- normally, no marks are visible on the outside of the tire even when touched
