

Anti-tack for Compounds

## PROMOL 1395

PROMOL 1395 is a beige, water-dispersible powder used in the rubber industry to prevent surface sticking of unvulcanized rubber compounds in the form of sheets or strips. It is used in the dipping unit of batch-off lines or similar application devices.

The product offers numerous advantages:

- suitable for demanding uncured rubber compounds; meaning very sticky compounds or very soft, cold-flowing compounds
- ready-to-use dispersion is very stable
- forms a uniform and well-adhering coating on the compound surface
- very good separation effect on all kinds of compounds
- separation film is non-corrosive and not abrasive
- treated compounds are not slippery and can be fed well into mills and extruders
