

Mould Release Agent

PROMOL PL/E

PROMOL PL/E is a water-soluble concentrate of milky appearance. It is very effective as a mould lubricant and is especially used for injection moulding, and in the manufacture of articles which are to be painted or bonded after vulcanisation.

The product offers numerous advantages:

- water based
- very good separation properties
- designed for injection moulding
- not corrosive
- paintable and bonding ability on most compounds
- stable emulsion after dilution
