

Mould Release Agent

## PROMOL PL/NE

PROMOL PL/NE is a water-soluble concentrate of milky appearance. It is very effective as a mould lubricant and is especially used for injection and compression moulding and in the manufacture of articles which are to be painted or bonded after vulcanisation. It can also be applied on rubber surfaces.

The product offers numerous advantages:

- water based
- very good separation properties
- designed for injection and compression moulding
- good wetting properties on uncured rubber article
- not corrosive
- paintable and bonding ability on most compounds
- stable dispersion after dilution
