

Tire Inside Paint

PROMOL TI 1404

PROMOL TI 1404 is a light-grey aqueous dispersion used in the tire industry to provide release and lubricity between the bladder and the unvulcanized tire („green tire“). It is applied before vulcanization onto the inside of the green tire, ideally by spraying.

The product offers numerous advantages:

- water-based
- silicone-free
- provides good release and lubricity
- leaves a clean surface after cure
- free of carbon black

AVAILABLE PACKAGING

DESCRIPTION	NET QUANTITY
IBCs	1.000 kg
Steel drums	200 kg
